SUMMARY

Software Engineer with 1 year of hands-on experience in backend development using C#, ASP.NET, SQL, NoSQL, and cloud services such as AWS and Azure. Experienced in developing RESTful APIs following Clean Architecture principles, integrating payment gateways, and implementing security measures. Skilled in SQL query optimization, delivering significant performance improvements.

EXPERIENCE

Backend Software Engineer Junior

BV Bank by Act Digital

july 2026 - Present, Barueri, SP

- Lead the migration of microservices from Azure DevOps/ECS to GitHub/EKS, upgrading applications from .NET 6 to .NET 8, containerizing workloads with Docker, and configuring IAM roles through Terraform, resulting in infrastructure modernization and reduced operational costs associated with ECS.
- Configure CI/CD pipelines using GitHub Actions (v2), including builds, automated testing, security scans (Sonar, Veracode, Prisma), and multi-environment deployments (staging, sandbox, and production with canary deployments), ensuring secure and traceable releases.
- Implement Infrastructure as Code (IaC) with Terraform to provision IAM roles and policies and integrate OIDC with EKS, enabling secure access to AWS Secrets Manager through IRSA (Web Identity).
- Integrate services with the AWS ecosystem (Secrets Manager, EKS, ECR, Parameter Store) and messaging technologies such as Apache Kafka, ensuring asynchronous communication and resilience across microservices.
- Migrate legacy authentication to OAuth 2.0/OpenID Connect (Curity), configuring token validation flows for CORE applications and entry points, ensuring compliance with the current identity provider.
- Manage application deployments on Kubernetes (EKS) using Helm charts, configuring HPA, service accounts, health checks, and observability with OpenTelemetry and Dynatrace, enabling end-to-end application monitoring.

Backend Software Engineer Junior

EvolutionSoft

december 2025 - july 2026 (8 months), Itapetininga, SP

- Developed and maintained 6+ REST APIs in C# .NET, applying Clean Architecture, SOLID principles, and Clean Code practices, increasing code testability by approximately 45% and reducing average maintenance time by 30%.
- Implemented role-based access control (RBAC) with granular authorization per system routes. Used middleware to validate permissions, ensuring security, scalability, and a clear separation between authentication and authorization.
- Structured systems with a clear separation between Domain, Application, Interface, and Infrastructure layers, reducing module coupling and decreasing new feature bug rates by 35%.
- Implemented integrations with Pagar.me and Mercado Pago, processing 150+ daily transactions via credit card, boleto, and Pix, ensuring 98.5% service availability and reducing payment failures by 20% through improved exception handling and retry mechanisms.
- Collaborated with senior developers on code reviews and architectural decisions, contributing to improved internal standards and a 25% reduction in technical rework.
- Configured and integrated Amazon S3 to handle 2,000+ monthly file uploads, implementing secure uploads, presigned URLs, and IAM-based access control policies, reducing infrastructure costs by 20%.
- Performed diagnostics and troubleshooting in development and staging environments, identifying bottlenecks that improved API response times by 30% and reduced recurring incidents.

Backend Development Intern

EvolutionSoft

may 2025 - december 2025 (8 months), Itapetininga, SP

- Supported the development of REST APIs in C# .NET, applying Clean Architecture and SOLID principles, contributing to improved code organization and maintainability.
- Assisted in structuring systems with layered architecture (Domain, Application, and Infrastructure), helping reduce coupling and improve overall project readability.
- Collaborated on integrations with Pagar.me and Mercado Pago, supporting the implementation of payment flows via credit card, boleto, and Pix.
- Contributed to the integration with AWS S3, assisting in the implementation of secure file uploads and generation of presigned URLs for controlled access.
- Helped identify and fix bugs in development environments, contributing to improved API performance and stability.

EDUCATION

Bachelor's Degree in Systems Analysis and Development

São Paulo College of Technology – FATEC-SP · Itapetininga, SP · fevereiro de 2024 - dezembro de 2026 · GPA: 8.23/10

SKILLS

Backend: C#, .NET, ASP.NET Core, Entity Framework Core

Frontend (basic): JavaScript, HTML, CSS, Bootstrap

Databases: PostgreSQL, MySQL, SQL Server, MongoDB, Amazon DynamoDB

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Rancher

Infrastructure as Code (IaC): Terraform
